Harness The Power Of DDR5

Taking speed, capacity, and reliability even further, the cutting-edge technology of this DDR5 module gives that next-level edge for your system's performance. With an aggressive 5600MT/s frequency, it's 75% higher than a standard 3200MT/s DDR4 to provide multi-core CPUs with extreme responsiveness and the power to multi-task seamlessly.

HIGHER FREQUENCY

Greater Power Efficiency

Even with all of its extra power, this DDR5 module improves upon its predecessor with on-module voltage regulation. A power management integrated circuit (PMIC) reduces the burden on the motherboard control and results in a lower voltage of 1.1V versus 1.2V for DDR4 for even less power consumption.

LOWER VOLTAGE 1.1V

UDIMM/SODIMM DDR5 - 5600MT/s
